- Subject changed from Add support for Interlace mode to Add support for Interlace mode (in scaler)

Actually this works in 15KHz mode! Try it in 'RGB' mode on a CRT. Also I found it works in 'scandouble mode' too iirc.

I haven't got support in the video scaler though - will require a little detection logic of the weird sync pulses this hack makes. So it doesn't currently work with VGA, DVI and HDMI.
