

EclaireXL - Bug #48

CORE13 - Veronica BASIC not working

06/13/2017 02:14 AM - Stephen

Status:	Closed	Start date:	06/13/2017
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0:00 hour
Target version:			
Description			
I've tried various RAM and NTSC/PAL settings. When I run "detector.com" from the attached ATR, the screen flickers and I get "Veronica Not Detected". My Veronica is a black cased Revision 2.0.			

History

#1 - 06/13/2017 02:21 AM - Stephen

Also, VREGREAD fails both tests, and VRAMTEST fails all 4 tests.

#2 - 06/13/2017 02:23 AM - Stephen

VREGREAD passes both tests, VRAMTEST passes the 4 tests.

Guys - I am very sorry. I was not loading the BIOS first. Veronica is working properly. I tried to delete this, but must not have appropriate permissions.

#4 - 06/13/2017 02:40 AM - Stephen

- Subject changed from *CORE13 - Veronica not detected* to *CORE13 - Veronica BASIC not working*

OK - I got the rotator demo working. However, I cannot get Veronica BASIC to load. It either hangs or says it cannot communicate with the cart. Pressing F10 causes my monitor to see the input switch, but I get a black screen, and have to do a full power cycle. F12 does take me to the settings screen.

So all tests work but veronica basic does not?

I know a bit about veronica, I built a veronica clone for the ultimate cart but never debugged it.

#6 - 06/13/2017 05:31 PM - Stephen

- File *vbasic.xex* added

Yes, everything on the ATR I attached works. I will attach the version of Veronica BASIC I was trying to use. This evening I will arrange my desk better so that I can have a real Atari plugged in next to the Eclaire to make side by side testing easier.

Veronica basic works on the 'Veronica' Ultimate Cart fpga core. So very odd it doesn't work on the original. You definitely has a v2 veronica? I don't think it works on v1.

#8 - 08/01/2018 10:05 PM - foft

- Status changed from *New* to *Closed*

Closed. Working fine with my Veronica clone and no feedback received from tester.
