Description

SIDE1 works fine, but SIDE2 does not work. I contacted Sebastian and he kindly send me some details. Need to look into this. Suspect its down to dynamic RD4/RD5.

In v8, uh oh! I don't think I changed anything before v8 that would fix this... I will have to get RoyE to double check with the v9 core on the v1 prototype.

I can confirm that Side 2 is now booting with SDX and the Sideloader rom..
I just now flashed the v9 core for Version 1 prototype..
RoyE.

Great, thanks Roy. Will close this for now, please reopen if it breaks again!
